Unlocking Creativity, Sharing Prosperity: NFT-Powered Writing Pays
“Seeking Writers And Manuscripting Publishers”

The background features several large green circles, each with a wedge-shaped segment removed. These shapes are positioned in the corners and center of the slide, creating a decorative pattern.

Problem

Long payouts for authors. Unfair incomes leading to a decline in writing quality and limited access to unique and captivating pieces for readers.

Other aggregator

Hypothesis

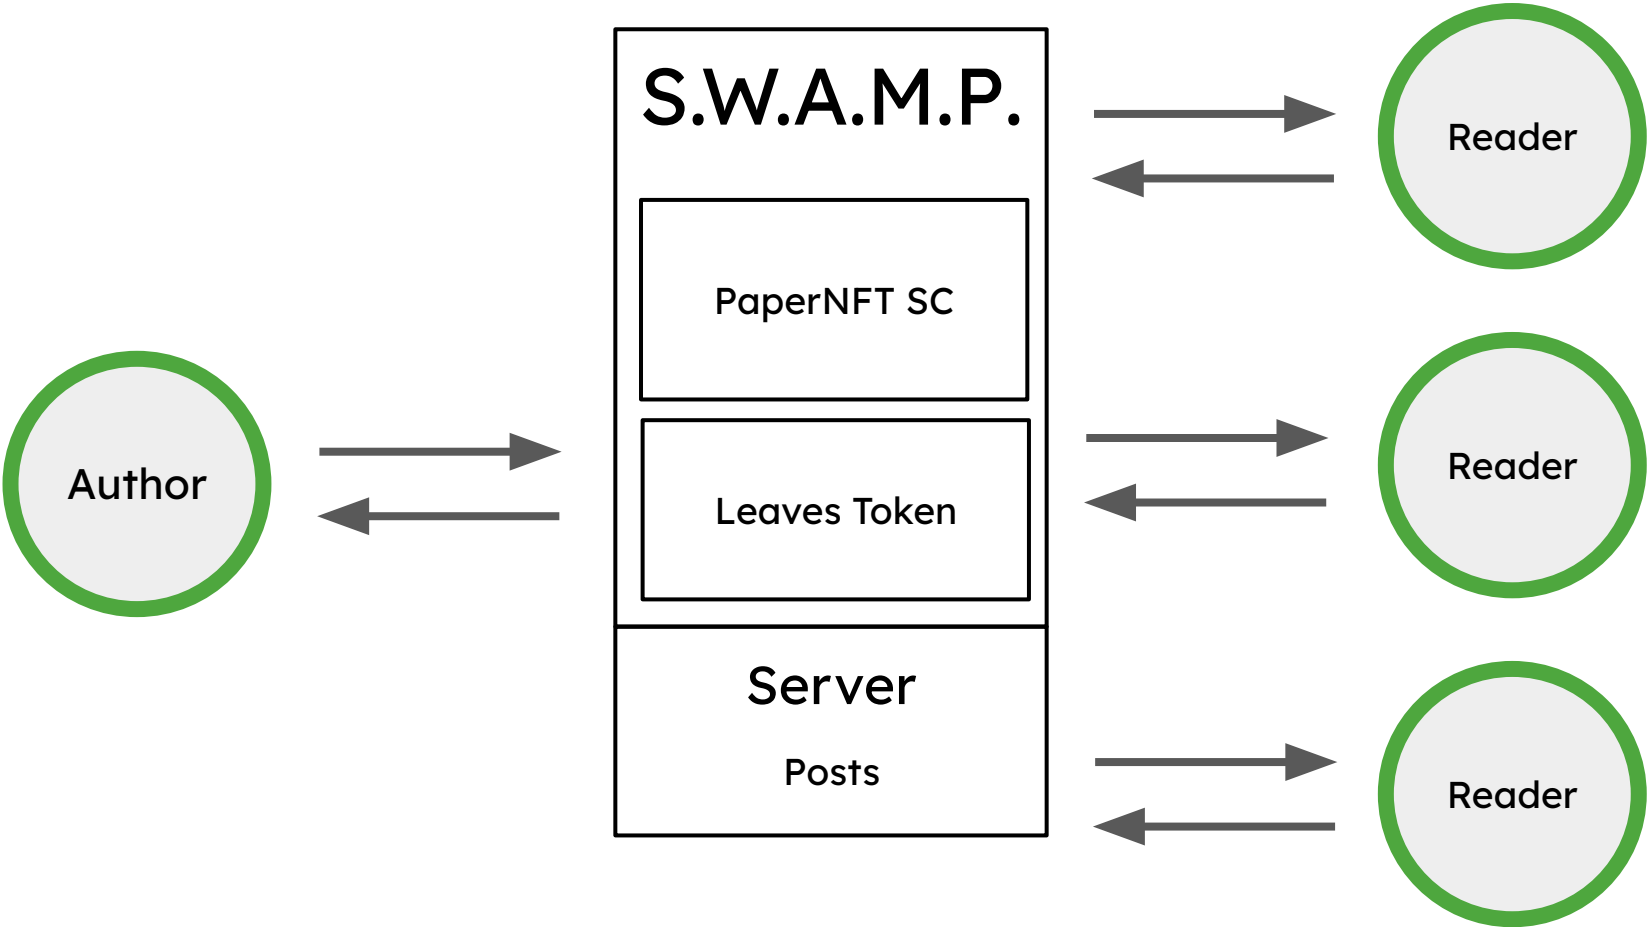

Create platform, where readers pay for each post, utilizing blockchain tokens to ensure permanent and direct payment to authors.

The background of the slide is white and features several large, solid green circular shapes. These shapes are partially cut off by the edges of the frame, appearing as segments or arcs. They are scattered across the slide, with some in the top corners, one in the middle left, one in the middle right, and some along the bottom edge.

Solution

Make up “swamp” where authors and readers could write/read posts. Smart contract as ‘fair middle’ for payments and publishing

Problem Statement

Our software project addresses the critical problem of efficiently diagnosing diseases and connecting individuals with the right doctors. Traditional healthcare systems often lack accessibility and can be time-consuming, leading to delayed or inaccurate diagnoses. These inefficiencies and challenges within the healthcare domain can cause significant stress, delay treatment, and undermine overall patient well-being.

Solution Description

Our platform revolutionizes the healthcare experience by providing a comprehensive solution to the identified problem. Through an intuitive interface, users can input their symptoms, which initiates a guided question-and-answer process. The system collects relevant information to generate a preliminary diagnosis based on advanced algorithms and medical knowledge. Additionally, the platform recommends doctors who specialize in the relevant field, ensuring that users receive the most appropriate care.

Main Features List

- A bot for preliminary diagnosis for the user
- Doctors Online Booking service for partner diagnostic centers
- Dataset with additional list of doctors
- Patient history tracking

Additional Features

- Chat with doctors
- Video call with a doctor
- Notifications for the user related to its disease

Benefits to Users

1- Accurate and Efficient Diagnosis: Users can receive a preliminary diagnosis quickly, reducing anxiety and enabling them to take proactive steps toward treatment.

2- Personalized Doctor Recommendations: Our platform ensures users are connected with doctors who specialize in their specific condition, enhancing the likelihood of successful treatment outcomes.

3- Time and Cost Savings: By eliminating the need for extensive research and multiple doctor visits, our platform saves users valuable time and reduces healthcare-
